

Adrián Gallardo Buenrostro

Nayarit, Mexico • +52 323 101 3548 • chimi.7zip@gmail.com • GitHub: github.com/CHIMIgb

Software Engineer and Full Stack Developer passionate about technology and building modern digital solutions. I develop solutions end-to-end: from planning, flow diagrams, and database design, through development and production deployment. I have delivered solo and team projects for both government and private companies, which lets me adapt quickly to any environment and technology.

PROFESSIONAL EXPERIENCE

SEPEN — Public Education Services of the State of Nayarit

Full Stack Developer | Tepic, Nayarit

January 2026 – April 2026

- Replaced 100% of the manual charge hand-over process —required by Nayarit's Entrega-Recepción Law— with the Sistema de Entrega-Recepción (SERS), digitizing the operation of 1 General Directorate, 4 Directorates, and ~45 Departments.
- Structured access control through an RBAC module with 8 institutional roles, 22 granular permissions, and 4 organizational scope levels, with dynamic role-based navigation.
- Ensured LGPDPPSO compliance with a SHA-256 (Merkle Tree) cryptographic chain of custody and a 3-phase forensic verifier able to detect deleted, modified, renamed, or moved files.
- Scaled organizational hierarchy processing to O(1) complexity with Materialized Path and asynchronous tasks in Celery/Redis; system live in production since April 2026.

CROV — PRASE System

Full Stack Developer | Tepic, Nayarit

July 2025 – December 2025

- Eliminated the risk of data loss on an insurance policy management platform with 100–500 active policies across 3 cities, fixing critical production bugs on a mission-critical system that previously ran on paper.
- Extended the platform with new modules and forms in React (Next.js / NestJS) consuming REST APIs, handling loading/error states per direct client requirements.
- Maintained production stability through a proper separation of dev/prod environments.

Instituto Estatal de Educación Normal

Backend Developer | Tepic, Nayarit

April 2025 – October 2025

- Delivered a complete REST API for a tracking platform covering 100–500 graduates, enabling real-time statistics on job placement used in official institutional reports.
- Secured access for ~30 users (administrators and secretaries) with JWT authentication, role-based access control, full CRUD, and automated reporting.

Industrial Las Norteñas S.A. de C.V.

Full Stack Developer | Tepic, Nayarit

April 2024 – March 2025

- Eliminated a full week of payment delay for more than 60 zone supervisors with a web-based commission calculation system, replacing an error-prone manual Excel process.
- Reduced calculation errors to zero and increased commercial transparency through supervisor approval workflows and custom reports.

PROFESSIONAL PROJECTS

ROMs Vault – roms-vault.vercel.app | github.com/CHIMIgb/ROMs-Vault

Full Stack Developer | Personal Project
2026 – Present

- Built a catalog of 100+ retro games across multiple consoles (PSP, PS2, N64, GBA, NES, SNES, Game Boy, Nintendo DS, Dreamcast, Saturn, Genesis, and more), growing constantly.
- Implemented an in-browser emulation system to play titles directly online, plus a file download module.
- Built platform, genre, and region filtering, dynamic catalog sorting, and per-title download/play-count metrics.
- Deployed the application on Vercel, managing the full build and production release cycle.

UrbanPlan 3D – [desarrollo-urbano-app.vercel.app](#) | [github.com/CHIMIgb/Desarrollo-Urbano](#)

Full Stack Developer | Personal Project (solo)
Last 2 months – Present

- Cut the modeling of full city sections down to seconds, letting users visualize real building scale relative to their surroundings before construction.
- Integrated GIS/3D rendering with MapLibre GL JS and Turf.js over satellite and OSM data, with a "Glassmorphism" UI built in Vanilla JS (reactive ES Modules) with no heavy framework dependencies.
- Built a REST API in Node.js/Express with JWT authentication and Bcrypt hashing, and PostgreSQL 16 (JSONB) persistence for projects and urban infrastructure.
- Delivered a fully functional app ready for any user, with real-time normative metrics (site coverage, density ratio, green area, max height, estimated population) per lot and citywide.

EDUCATION

UNIVERSIDAD TECNOLÓGICA DE LA COSTA

Engineering in Software Development and Management

August 2024 – April 2026

TSU in Information Technologies - Multiplatform Software Development

August 2022 – July 2024

LANGUAGES

Spanish: Native

English: Technical (reading and comprehension of documentation)

SKILLS

Technical Skills

Backend: Node.js, NestJS, Express, REST APIs, Python (Django REST Framework), Celery/Redis, PHP, Flight

Frontend: React, Next.js, Angular, JavaScript ES6+, HTML5, CSS3, Vue, Tailwind

Tools: Git, GitHub, Postman, Docker

Databases: PostgreSQL, MySQL, SQL Server

IoT & Hardware: Arduino, C++

Security & Deployment: SHA-256/Merkle Tree, applied cryptography, dev/prod environment separation, production deployment, OWASP compliance, separation of concerns, layered architecture

Soft Skills

Team leadership

Effective communication

Problem solving

Adaptability to new technologies

Attention to detail
